

WIRELESS TRANSMITTING DEVICE FOR COMPUTER FACILITIES

BACKGROUND OF THE INVENTION

1. Field of the Invention

The present invention relates to a wireless
05 transmitting device and more particularly to a wireless
transmitting device for computer facilities.

2. Description of the Prior Art

A shown in FIG. 1, typical computer facility, such
as the portable computer 11 is coupled to the other
10 computer facilities or coupled to the electric power
source with an electric wire 13 and/or a transformer
device or a network box 12, for allowing the computer
11 to be coupled to the networks. However, the electric
wire 13 may not be easily stored and may not be easily
15 used and coupled to the electric power source, and
particularly, may not be easily used outdoors.

The present invention has arisen to mitigate
and/or obviate the afore-described disadvantages of the
conventional computer facilities.

20 SUMMARY OF THE INVENTION

The primary objective of the present invention is
to provide a wireless transmitting device for coupling
to the computer facilities and for allowing the
computer facilities to be connected to the networks and
25 to be used outdoors.

In accordance with one aspect of the invention,
there is provided a wireless transmitting device

comprising a computer including a socket provided therein, and a wireless LAN device including a USB provided thereon for plugging to the socket of the computer without additional electric wires, and for
05 coupling to the networks outdoors.

The wireless LAN device further includes an antenna for signal receiving and emitting purposes.

Further objectives and advantages of the present invention will become apparent from a careful reading
10 of a detailed description provided hereinbelow, with appropriate reference to accompanying drawings.

BRIEF DESCRIPTION OF THE DRAWINGS

FIG. 1 is a perspective view illustrating a typical computer facility having a network box;

15 FIG. 2 is a partial exploded view of a wireless transmitting device for computer facilities in accordance with the present invention; and

FIG. 3 is a perspective view of the wireless transmitting device for computer facilities.

20 DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

Referring to FIGS. 2 and 3, a wireless transmitting device for computer facilities in accordance with the present invention comprises a computer 11, such as a portable computer 11 including a
25 socket opening or a socket 23 provided therein, such as provided in the rear portion thereof. The wireless transmitting device in accordance with the present

invention further comprises a wireless local area network (wireless LAN) device 21, such as the wireless LAN compatible with the IEEE 802.11 standards, and based on the direct sequence spread spectrum (DSSS) technology. The wireless LAN device 21 includes a
05 coupler 221, such as a universal serial bus (USB) 22, provided thereon for coupling or plugging to the socket 23 of the computer 11. The wireless LAN device 21 further includes an antenna 24 for receiving and/or
10 transmitting and/or emitting signals.

It is to be noted that the computer 11 and the wireless LAN device 21 may be easily carried outdoors, and the wireless LAN device 21 may be easily coupled to the computer 11 without additional electric wires, and
15 may thus be coupled to the networks outdoors.

Accordingly, the wireless transmitting device may be used for coupling to the computer facilities and for allowing the computer facilities to be connected to the networks and to be used outdoors.

20 Although this invention has been described with a certain degree of particularity, it is to be understood that the present disclosure has been made by way of example only and that numerous changes in the detailed construction and the combination and arrangement of
25 parts may be resorted to without departing from the spirit and scope of the invention as hereinafter claimed.
